Reproducibility check		
Description		**Comments**
Contact details		
Name	Prince Oppong Boakye	
Email	poppongb@uni-muenster.de	
Submission details		
State the ID for the submission (e.g. MP.2020.XXX)	4320	
-		
Can the data be read using software indicated by author?	Yes	
Are the data in archive-ready formats (CSV, TXT)?	Yes	
Code description		
Can you identify code that produces all tables, figures and in-text numbers?		
Figures	Yes	
Tables	Yes	
In-text numbers	Yes	
Stated requirements		
Do the author state any specific requirements for replication?		
No requirements	☐	
Software requirements (State software in comments, eg. packages and versions: R 3.7 etc.)	☑	R and the packages esc, ggplot2, psych, dplyr, and effectsize
Computational requirements (Cluster size, bootstraps etc.)	☐	
Time requirements (Length of necessary computation in hours, weeks, etc.)	☐	
Missing requirements		
Is any software requirements missing? (state missing software in comment)	No	
Computing Environment of the replicator		
State your computing environment e.g. Windows 10 Education, 11th Gen Intel(R) Core (TM) i5-1145G7 @ 2.60GHz 1.50 GHz, 16,0 GB (15,7 GB usable)	MacOS Sequoia	15.4.1, Apple M4 Pro 10-core GPU, 24 GB RAM
Replication		

Describe your findings when replicating the data		
Figures replicate (state detail in comment if needed, e.g. table 2 contains no data)	Yes	
Tables replicate (state detail in comment if needed, e.g.: table 1, paper version looks different from the one generated by code)	Yes	
In-text numbers replicates	Yes	
Classification		
Full reproduction	☑	
Full reproduction with minor issues	☐	
Partial reproduction	☐	
Not able to reproduce most or all of the results	☐	
Reasons for incomplete reproducibility		

Reproducibility check		
Description		**Comments**
Discrepancy in output (either figures or numbers in tables or text differ)	☐	
Bugs in code that were fixable by the replicator (but should be fixed in the final deposit)	☐	
Code missing, in particular if it prevented the replicator from completing the reproducibility check	☐	
Data preparation code missing should be checked if the code missing seems to be data preparation code	☐	
Code not functional is more severe than a simple bug: it prevented the replicator from completing the reproducibility check	☐	
Software not available to replicator may happen for a variety of reasons, but in particular (a) when the software is commercial, and the replicator does not have access to a licensed copy, or (b) the software is open-source, but a specific version required to conduct the reproducibility check is not available.	☐	
Insufficient time available to replicator is applicable when (a) running the code would take weeks or more (b) running the code might take less time if sufficient compute resources were to be brought to bear, but no such resources can be accessed in a timely fashion (c) the replication package is very complex, and following all (manual and scripted) steps would take too long.	☐	
Data missing is marked when data should be available, but was erroneously not provided, or is not accessible via the procedures described in the replication package	☐	
Data not available is marked when data requires additional access steps, for instance purchase or application procedure.	☐
